"I can do this." - Invincible

Dear Skybound Hiring Team,

I am excited to apply for the Senior Quality Assurance role at Skybound. I bring 7 years of game QA experience across Blizzard Entertainment and Intrepid Studios, with a background in live-service validation, data quality, economy and systems testing, bug triage, test planning, release-readiness support, Unreal Editor workflows, and cross-functional QA collaboration.

What stands out to me about this opportunity is the mix of execution, judgment, and coordination: milestone readiness, build health awareness, external QA alignment, bug trend visibility, and release-quality accountability. That is the QA work I care about most: helping teams understand what changed, what risk it creates, what needs testing, and what evidence we have before calling something ready.

At Intrepid Studios, I worked as a QA Engineer II on Ashes of Creation with a focus on economy, crafting, progression, rewards, events, and player-facing MMO systems. That work combined test planning, Jira/Confluence documentation, Unreal Engine 5 Editor validation, playtest support, and clear escalation of player-impact risks.

At Blizzard Entertainment, I built a strong QA foundation across multiple titles and live-service environments, including nearly 3 years focused on Diablo Immortal data quality. That work strengthened my ability to investigate discrepancies, validate data accuracy, support telemetry and pipeline testing, and communicate quality risks clearly with engineering, product, and BI partners.

I also maintain a public QA portfolio with small tooling projects in Python, pytest, and GitHub. The work is supporting evidence for Technical QA habits I want to keep sharpening: structured reporting, verification discipline, clean documentation, and traceable follow-through.

Skybound's creator-owned environment and IP-driven game work fit the kind of QA judgment I have built across Blizzard and Intrepid: protecting the player experience, respecting the source material, and giving development teams useful signal instead of noise. I would welcome the chance to support Skybound's QA planning, partner coordination, milestone readiness, and long-term quality efforts.

GAMING ACHIEVEMENTS

The Finals - Diamond, current season; World of Warcraft - multiple Gladiator titles across several classes; StarCraft II - Diamond; Overwatch 2 - Master; Heroes of the Storm - Rank 1 / Grand Master history.

These achievements support how I think about competitive pressure, tuning, readability, fairness, player motivation, and live-service systems from a player-first QA perspective.

Thank you for your consideration,

Keith McAvoy
